

FENJA

A STAR OF THE FUTURE

The highest quality

Cabinets crafted from 5-layer solid tiger bamboo extreme (26mm). Front baffles constructed from aircraft aluminum using 5-axis CNC machines with a unique pattern to reduce reflections and enhance clarity.

Top end Components

Low frequencies are delivered by four 7-inch drivers and a 5-inch midrange driver all by SEAS. The highest frequencies are handled by two SB Santory tweeters. One is positioned at the front and one at the back, which can be turned on/off as desired.

Ready to Connect

With terminals from WBT and internal wiring from Van den Hul in a special hybrid configuration of pure copper and silver plating, Fenja ensures unparalleled signal processing and minimal signal degradation.

Fenja is not just a speaker but a true star in sound reproduction.

In Nordic methodology, Fenja is said to hold immense power. The power of our Fenja lies in design, price point, quality, and sound reproduction.

With a unique combination of advanced technology and top-end components, Fenja is designed to deliver recordings closest to what the artist intended them to be heard. Even the most demanding.

Fenja is designed with a phase-controlled crossover with discrete time delay, ensuring precise and coherent sound reproduction. Its filter utilizes only the finest components, including the best zero-ohm coils and capacitors available.

Fenja offers a completely linear frequency response without any peaks, recreating live concert experiences with incredible realism. For those who appreciate musical enjoyment and strive for the best audio experience, Fenja is an unavoidable investment.
